

ABSTRACT

This disclosure provides pharmaceutical compositions which include oil extract from plants from the *Labiatae* family. In particular, the compositions can be formulated by combining extracts of essential oils from plants of the *Labiatae* family with an
5 organic acid or a Group I salt. It is believed that the antimicrobial activity of the pharmaceutical composition is due to the presence of organic phenols, such as isopropyl-o-cresol, in the oil extract from the plants.
